

v-Presence Enterprise-Class Video in the Cloud

END-TO-END MANAGED VIDEOCONFERENCING & VISUAL COLLABORATION

v-Presence is an end-to-end managed videoconferencing service that enables organizations to enjoy the full benefits of their video communications technology, with increased reliability, flexibility and cost savings. v-Presence provides a consistent and high quality user experience utilizing Whitlock's state-of-the-art video infrastructure.

Service Overview

v-Presence makes videoconferencing easier than ever. v-Presence provides a comprehensive managed videoconferencing service to ensure the best possible video experience and maximum up-time. Whitlock takes responsibility for the technical integration to ensure the underlying video communications infrastructure works together seamlessly and consistently for maximum performance. v-Presence is ideal for organizations that wish to get the maximum benefits of video communications without the need for significant resource investment for supporting the service. The service is backed by our global team of video experts and professional customer support staff.

With v-Presence, it only a few clicks to connect to other video participants. By using the v-Presence service, you can connect with another site quickly and simply using your video directory, which is managed by Whitlock. Furthermore, if you need to hold a video meeting with a third party such as a partner, customer, supplier or stakeholder, we can make that happen too.

More on the Benefits

Scalability

v-Presence is a scalable solution that enables you to upgrade your video service at a minimal cost. It allows end-points to 'plug-and-play', so that you can enjoy the benefits of the service immediately. Our managed and monitored infrastructure enables you to scale to unlimited end-points.

Summary at a Glance

- Managed videoconferencing service for the highest quality video collaboration experience
- Highly scalable solution for effective service upgrade and expansion
- Global Video Exchange provides maximum up-time and quality
- Global network of VNOCs and PoPs comprised of the latest in videoconferencing infrastructure and facilities
- Works with your existing network and infrastructure
- Excellent customer support service provided by a team of skilled video network experts

More on the Benefits

Scalability, cont'd.

Our team of video engineers will certify and configure your video endpoints and update your directory without the need to change your enterprise network and infrastructure.

Reliability

Whitlock has Points-of-Presence (PoPs) and Video Network Operation Centers (VNOCs) located in London, Toronto, New York, Hong Kong and Shanghai. Our infrastructure is comprised of the latest in videoconferencing bridges and facilities. Whitlock will help you to maximize your service quality and up-time. Our professional VNOC team will monitor your video performance and connections around-the-clock to ensure the highest service level is delivered.

Flexibility

v-Presence enables communication with any standards-based videoconferencing platform, over IP or ISDN networks including standard definition, high definition and Telepresence endpoints. It will give you the flexibility to connect with the latest videoconferencing systems, with your legacy equipment, and over different types of connectivity and bandwidth.

Cost Effective

v-Presence provides you with more than the cost benefits of reduced business travel – it minimizes the operational cost of running video services by allowing you to leverage our infrastructure and our team of professionally trained video experts. You get all the benefits of our expertise and infrastructure without the need to invest in additional hardware. v-Presence frees your valuable IT resources from the non-core tasks of updating the systems and user directory. Our Points-of-Presence, strategically located globally in regional business hubs, enable you to connect your ISDN endpoints and lower your ISDN costs by transporting video across our reliable IP-based video exchange network. Furthermore, our experience shows clearly that if the video service is easy-to-use, reliable and consistently.

Furthermore our experience shows clearly that if the video service is easy-to-use, reliable and consistently of high quality, the adoption rate rises and productivity increases.
